HSMA Session 3B: Exercise 1

Let's try creating some more maps for the STATS19 dataset.

First, we're just going to use a **geojson** file that already has some counts per MSOA joined in.
stats_19_counts_by_msoa_3857.geojson

Create at least one choropleth.

Try out different filters, categorisation modes and heatmap settings.

After you have done the above, you could also carry on working with point data, including trying out rule-based point styling.
